FOLTZ
BUILDINGS

There's a difference between builders that offer excellence and those who deliver it.

The people you'll work with at Foltz are professionals with decades of experience and thousands of satisfied customers. Each and every representative has hands on construction experience. They've been there before.

Whether it's your first building project or you've built before, trust the people at Foltz Buildings to deliver the quality you expect.

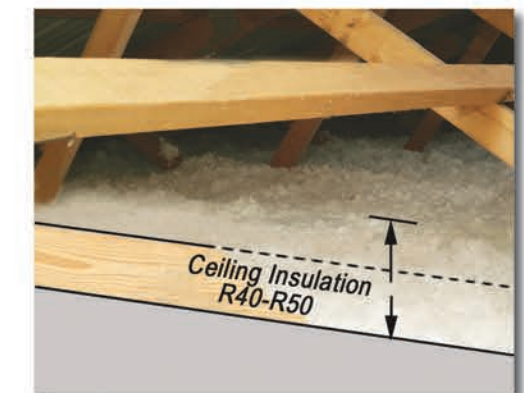

- *Planning and consultation that meets your budget and time requirements.*
- *Professionally designed buildings that maximize function and space.*
- *Construction teams that perform over and above your expectations with attention to detail.*

Superior Technology. Unmatched Customer Service.

Glue Laminated Columns with Steel Pin Anchor.

Finger jointed columns are significantly stronger than field spliced / nailed columns (more than 30% stronger). Each column is continuous from the base to the top of the truss. Concrete Footings Standard with Foltz Buildings. Steel pins installed in columns are anchored in 120 lbs. of concrete per hole below the frost line.

Options Include:

- *Super Insulated Building Packages*
- *R 19 Walls R 40 - R 50 Ceilings*
- *Thermal Insulated Windows / Doors*
- *Building Wrap*
- *Acoustical steel panels*

Energy efficiency is more important than ever.

Our insulated shops, garages and commercial buildings are constructed to meet or exceed most standards. The optional building wrap on the outside walls minimizes moisture and humidity penetration. 6" or 8" thick (min.) blankets of fiberglass insulation fill the walls from floor to ceiling with a one and a half inch space of dead air on both sides. Before the inside walls are finished a vapor barrier is applied to protect the walls and ceiling from condensation. Ceilings are insulated with blown in fiberglass (R40 - R50 rating), making each building as energy efficient as possible.

Custom Designed. Engineered Strength.

Engineered factory built trusses meet or exceed engineering standards.

Three ply columns to top of roof truss.

Three ply column on both sides of door frame.

2X8 Treated bottom nailer

We use the best select grade high performance Machine-Stress Rated lumber throughout.

The difference between Machine-Stress Rated lumber and standard framing material, is strength and reliability. MSR is both visually graded and electronically machine evaluated, resulting in superior strength that is more reliable and accurate than that of visually inspected lumber only. It bends less and has greater stiffness with fewer defects. Though the cost of MSR materials is slightly higher, it provides superior strength and greater reliability for years to come. Be sure you're getting the strength and reliability you deserve in your building project that only **Machine-Stress Rated** materials offer. You'll see the difference.

80 x 240 x 21

It's in the details.

Equipment changes over the years. You want your farm shop to be flexible, durable and efficient. It needs to accommodate changes and work for you. Season to season, year after year.

If it's your year round operations center, a hobby shop or multi-purpose agricultural equipment maintenance facility. We'll custom design it just for you.

- Office and Break Rooms
 - Parts Room
 - Bunk Space
 - Wash Bays
- Communication Center
- Climate Controlled Work Areas
- Anything you can imagine!

Our Success is Measured in Satisfied Customers.

We construct each building as if we were building it for ourselves. Our staff is continually seeking the best building components and the best engineering design ideas that make our buildings the best in the business.

- Glue laminated columns and framing materials selected for strength and durability.
- An engineered roof truss system that meets or exceeds all State building code requirements.
 - High quality, low maintenance doors and windows.
 - High performance painted steel panels finished to resist chalking and fading, providing the longest life possible.

The best professionals in the building industry deliver customer satisfaction. With hundreds of quality constructed structures built every year, by fully licensed and insured crews, be assured that when your building is finished it's built to last.

Elite Series Steel Panels Using G100 galvanizing, one of the heaviest in the industry, recognized for its superior corrosion resistance. Outstanding performance with a 9" rib spacing provides over 80,000 P.S.I. tensile strength. Available in a wide variety of colors and trim packages.

Elite Series Superior Paint This unique paint coating combines proprietary resin technology with color-fast ceramic pigments for maximum color retention and resistance to fading. This finish has undergone rigorous testing to ensure exceptional durability with long lasting aesthetics.
